REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: the prior art fails to teach or fairly suggest the claimed invention. Upon reconsideration and in light applicant's remarks and affidavit, the combination of Yang in view of Talarico and Walker is no longer seen as teaching or rendering obvious the claimed invention. The instant claims recite a multi-layer softball wherein the central core has a first hardness and the outer core layer comprises a second hardness which is less than the first hardness and wherein the softball comprises a compression of about 400 lbs. or less and a COR of about 0.400 to about 0.500 at about 88 ft/sec. The applicant has also filed an affidavit attesting to the criticality for the arrangement of the claimed hardnesses and recited compression and COR. These arguments are persuasive in overcoming the rejection of Yang in view of Talarico and Walker. Yang discloses additional layers for his ball that are not required by the instant claims. Further, the combination of Yang in view of Walker is no longer seen as teaching the recited compression and COR. The combination of Yang in view of Walker teaches modifying the COR such that the ball is a reduced flight ball for urban use. The instantly claimed range for the COR provides a ball that is capable of the same flight distances as a conventional or regulation ball.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
